POWER WISCONSIN FORWARD CONDEMNS PSC DECISION TO APPROVE \$2 BILLION IN METHANE GAS PROJECTS

PSC decision undermines Wisconsinites' health and financial well-being, and undermines Governor Tony Evers and the State's commitment to [100% carbon-free electricity](#) by 2050.

MILWAUKEE — The following statements were issued today in response to the Public Service Commission's approval of We Energies' methane gas plant proposals in the Town of Paris and the City of Oak Creek in southeastern Wisconsin.

Julia Alberth, Oak Creek Resident

"As a resident of Oak Creek and a public health professional, I am deeply disappointed by the Public Service Commission's (PSC) decision to approve construction of a 1,100 MW methane gas plant in our community. By siding with We Energies and Microsoft, corporations that made \$1.5 billion and \$88 billion in net profit in 2024, the PSC has chosen corporate profit over the health and safety of parents, children, older adults, disabled residents and future generations. This plant will increase air pollution, exacerbate chronic disease and contribute to premature death, particularly in communities already burdened by health inequities. The PSC's mission is to ensure safe, reliable, affordable and environmentally responsible utility services. By voting yes, the Commission has failed that mission and failed the people they are meant to serve."

- For an interview with Julia, please contact: abby@healthyclimatewi.org

Heather Allen, WI Policy Director, Elevate

"Wisconsin's energy bills are among the highest in the Midwest, and now these new methane gas projects will raise costs for local families and businesses who can't afford to pay more. The Public Service Commission has a duty to protect rate payers from out of control energy costs, approving these expensive projects worsens the burden on our already strained budgets."

- For an interview with Heather, please contact heather.allen@elevatenp.org

Jodi Jean Amble, Deputy Director, RENEW Wisconsin

"The PSC's decision to approve these methane gas plants represents an outdated solution to speculative energy demand. Wisconsin – and states across the country – are facing real challenges in planning for a changing electric grid. Electrification and

the rapid growth of data centers are shifting demand, but we don't yet have a clear picture of what that demand will be. We can't afford to undermine our clean energy goals by investing in fossil fuel infrastructure that will lock in decades of emissions. This decision underscores the need for integrated resource planning, so we can avoid reactive choices and instead chart a thoughtful, strategic path to 100% clean energy."

- For an interview with Jodi, please contact: abeld@renewwisconsin.org

Jayne Black, Wisconsin Field Organizer for Moms Clean Air Force

"The decision by the Public Service Commission to approve the proposed methane gas power plants is a major blow for Wisconsinites and locks our state into decades of continued reliance on fossil fuels that have devastating impacts on our children. The air pollution from these power plants contributes to our changing climate and can negatively impact respiratory health especially for the 76,900 children who have asthma in our state. This is a time when we should be prioritizing cleaner air with more affordable clean energy solutions. Our children deserve clean air and a stable climate."

- For an interview with Jayne, please contact Jblack@momscleanairforce.org

Courtney Brady, Midwest Deputy Director, Evergreen Action

"This decision is a disappointing step backward for Wisconsin's energy future. Approving these gas plants will put public health and energy affordability in harm's way. They will lock Wisconsinites into higher energy bills and decades of unnecessary, dangerous pollution. This decision makes it clear that Wisconsin needs a stronger, more accountable energy planning process that puts people, not utilities, first."

- For an interview with Evergreen Action, please contact emily@evergreenaction.com

Antonio Butts, Executive Director, Walnut Way Conservation Corp.

"This decision by the PSC is not just a regulatory misstep – it's a public health and environmental injustice. In neighborhoods like Lindsay Heights in Milwaukee, residents are already paying the highest percentage of their income on utilities – the most in the state. Approving new gas plants doubles down on systems that leave our communities sick and struggling to pay the bills – communities that are and have been eager to participate in implementing creative, sustainable solutions to the ecological and economic crises caused by corporate greed, greenlit time and again by the very regulatory agency tasked with protecting the public interest. We call on state leaders to stop rubber-stamping corporate profits and start centering community-driven clean-energy solutions that actually honor people and our shared planet."

- For an interview with Antonio, please contact: brogers@walnutway.org

Maria Fernanda Chavez, Energy Analyst, Union of Concerned Scientists

"This decision from the Public Service Commission of Wisconsin to approve new methane gas plants in the Town of Paris and City of Oak Creek is incredibly disappointing. Research shared with the commission makes crystal clear [the significant health and economic impacts](#) the gas plant will have on a community that has already been harmed by years of coal pollution. We Energies has a responsibility to serve the energy needs of all its customers, not just the uncertain energy demand of one or two large corporations. As Wisconsin continues to court data center developers, decision-makers and utilities must prioritize the public's best interest: clean and affordable energy that puts health over profits. We will continue to hold utilities accountable for future proposals that put people's health and wallets at risk."

- For an interview with Maria, please contact: mchavez@ucs.org

Molly Collins, Wisconsin Advocacy Director, American Lung Association

"Earlier this week, [28 national health organizations](#) made a declaration: Climate change is a health emergency that is already harming health and causing loss of life. We need to do more, immediately, to dramatically reduce greenhouse gas emissions from power plants, because burning methane gas and other fossil fuels is driving climate change and making people sick from air pollution at the same time."

- For an interview with Molly, please contact: Molly.Collins@lung.org

Jennifer Giegerich, Government Affairs Director at Wisconsin Conservation Voters

"Many, many organizations and people have diligently and consistently asked the Wisconsin legislature to address the serious short-comings in our energy policy since 2005. It has been well-documented that the Republican-majority has refused to even have hearings on bills to provide necessary updates to our energy landscape. The PSC has more discretion than it exercises. To blame the consumer and health advocacy community for failures to advance meaningful policy in this legislature on the same day that the PSC approved massive fossil fuel investments for a single utility is beyond gross. The PSC needs to take responsibility and not lay blame elsewhere."

- For an interview with Jennifer, please contact: jennifer@conservationvoters.org

John Imes, Cofounder & Director, Wisconsin Environmental Initiative

"Today's unanimous decision by the PSC to approve We Energies' methane gas plant proposals represents a missed opportunity for Wisconsin. Instead of investing in clean, affordable, job-creating energy solutions, we're saddling communities with costly, unnecessary fossil fuel infrastructure that may be obsolete before it's even paid off."

As someone who's worked in business, sustainability, and government, I've seen the enormous potential clean energy has to boost competitiveness and reduce costs. Battery storage is now 90% cheaper than a decade ago. Hundreds of Wisconsin companies are part of the clean energy supply chain, and major employers like Microsoft are demanding carbon-free energy. But rather than modernize our grid or repurpose existing fossil fuel sites into clean energy hubs, we're clinging to the past.

This decision ignores the strong public opposition, the health and environmental risks, and it's Wisconsin ratepayers and communities who will pay the price. We can—and must—do better. The PSC should be leading with vision, not signing off on legacy infrastructure that undermines our climate goals and economic resilience.”

- For an interview with John Imes, please contact: jimesother@gmail.com

Dr. Brittany Keyes, DPT; Clean Air Policy Manager with Healthy Climate Wisconsin

"Per an unfortunate state statute, the WI DNR is the only regulatory agency that considers environmental and human harms of emissions and thus, protects our families and communities. The WI DNR must stand up now, fully consider the expansive health harms and deaths that will result from the pollution of these methane gas plants, and deny these air permits."

- For an interview with Brittany, please contact: brittany@healthyclimatewi.org

Laura Lane, Wisconsin Outreach Director, Faith in Place

"We are deeply disappointed by the Public Service Commission's decision to approve the new methane gas proposals in Paris and Oak Creek. This choice puts fossil fuels over families, locking our state into decades of pollution and rising energy costs. The PSC is backing outdated infrastructure, paid for by consumers, when what we need is a rapid and just transition to 100% renewable and affordable energy. Wisconsin communities—especially those most impacted—deserve all possible efforts at building a just, green economy. We urge our leaders to listen to the voices of residents, faith leaders and environmental advocates calling for a just, sustainable energy future."

- For an interview with Faith in Place, please contact press@faithinplace.org

Stephanie Robinson, Co-Executive Director, 350 Wisconsin

"The people of Wisconsin placed their trust in the Public Service Commission, and we have been severely let down. The PSC's decision to approve the Oak Creek and Paris methane gas proposals represents a major step in the wrong direction, and will severely impact public health and ratepayers' bills, especially in marginalized communities. This is also a massive blow to our state's ability to meet our long-term

climate goals. We are extremely disappointed in the PSC, and we will continue to fight for environmental justice and a sustainable future for all.”

- *For an interview with 350 Wisconsin, please contact stephanie.robinson@350wisconsin.org*

Bryan Rogers, Director, Environmental Justice & Infrastructure Initiative

“The Wisconsin Public Service Commission’s approval of two new methane gas plants is an outright betrayal of public trust. These are not investments in reliability – they are investments in disposability and organized abandonment. The communities most impacted by energy burden, toxic emissions, and rising utility costs will remain locked into a polluted future they did not choose and cannot afford – a message we have delivered to the PSC loudly, clearly, consistently and legally. We resoundingly reject a future where so-called energy planning becomes a euphemism for fossil fuel expansion while frontline communities struggling for energy justice are sidelined. Wisconsin deserves visionary climate leadership rooted in repair and renewables - not extraction, exploitation and environmental harm.”

- *For an interview with Bryan, please contact: brogers@walnutway.org*

Cassie Steiner, Senior Campaign Coordinator, Sierra Club - Wisconsin Chapter

“The Wisconsin Public Service Commission has a responsibility to protect the public from corporate polluters, and the Commissioners have severely failed in their decision to approve both the Paris and Oak Creek plants. By moving forward with these expensive, polluting fossil fuel projects, We Energies’ customers will be locked into higher rates and decades of air pollution. We’re not going to stop fighting for a clean energy future in Wisconsin.”

- *For an interview with Cassie, please contact: cassie.steiner@sierraclub.org*

Hannah Sorensen, Public Health Professional in Milwaukee

“It is unacceptable that the PSC continues to side with We Energies, even when an overwhelming majority of the public expressed serious concerns about how these methane gas plants will harm their community’s health. The PSC’s job is to protect consumers, public health and the environment, and they are failing to do so.”

- *For an interview with Hannah, please contact: abby@healthyclimatewi.org*

Langston Verdin, Founder & Co-Executive Director, MKE FreshAir Collective

“The Public Service Commission’s decision to greenlight two new methane gas plants is a reckless endorsement of outdated infrastructure that will burden Wisconsin communities with higher energy costs, poor air quality and a compromised future. At a moment when bold, community-centered climate action is not only possible but essential, the PSC chose corporate profits over public health, over environmental justice, and over the very people they are meant to protect. This decision ignores the will of the people, the evidence of harm and the urgency of the

climate crisis — and it will be our most vulnerable neighbors who pay the highest price. Wisconsin deserves better.”

- *For an Interview with Langston, please contact langston@mkefreshair.com*

Sarah Zarling, Citizens Acting for Rail Safety

“These verdicts are disappointing and unsurprising. Although I commend each Commissioner's remarks of appreciating the opposing comments, I believe some of their other thoughts and remarks prove a few very key things: Anyone employed or appointed in a role like this should be more educated in the matters on which they are voting. In addition, the WI DNR plays an equally important role in how these projects are voted for, as well as their own industry leaning votes, and must be held accountable as well. We must continue educating ourselves and others and showing up to make our voices heard.

I do hope that these permit decisions and accompanying discussions can be the beginning of a more well-rounded discussion to foster much needed better understanding of the issues at hand, to hopefully ensure more informed voting outcomes in the future.”

- *For an Interview with Sarah, please contact sarahzarling21@gmail.com*
